Before you invest, consider how the ETF would work with your other investments and your tolerance for risk.

On September 21, 2020, Evolve Fund Corp. (the “Corporation”) completed a restructuring transaction involving, among other things, the re-designation of the outstanding Class A shares of the Corporation (the “Class A Shares”) as Shares of the ETF, a new class of shares of the Corporation (collectively, the “Restructuring”).

The Shares of the ETF are substantially similar to the Class A Shares, except that (i) the investments objectives, strategies and restrictions of the Shares were changed to reflect the Restructuring; (ii) the fees in respect of the Shares were changed to eliminate the performance bonus of the Class A Shares and to change the variable administration fee to a fixed administration fee for the Shares; and (iii) the Shares have purchase and redemption features typical of an exchange traded fund, rather than the more restricted closed-end fund features of the Class A Shares.

The historical data of the Shares of the ETF presented below is, in part, historical data of the Class A Shares and is based on the performance of the Corporation prior to the Restructuring. Because of the elimination of the performance bonus and the implementation of the fixed administration fee, as well as the increased liquidity of the Shares following the Restructuring, the historical data of the Shares of the ETF presented below under the headings “Quick Facts”, “Trading Information” and “How Much Does it Cost?” is anticipated to differ for the Shares of the ETF going forward.

This ETF is an “alternative mutual fund” as defined in National Instrument 81-102 – Investment Funds (“NI 81-102”). The ETF has the ability to use investment strategies that are not permitted for other types of mutual funds. The specific features that differentiate this ETF from other types of mutual funds include the increased use of leverage through cash borrowing. In accordance with the ETF’s investment restrictions and NI 81-102, the aggregate value of all cash borrowing by the ETF shall not exceed 50% of the ETF’s net asset value. While these strategies will only be used in accordance with the ETF’s investment objectives, strategies and restrictions, during certain market conditions they may accelerate the risk that an investment in shares decreases in value.

HOW RISKY IS IT?

The value of the ETF can go down as well as up. You could lose money. One way to gauge risk is to look at how much an ETF’s returns change over time. This is called “volatility”.

In general, ETFs with higher volatility will have returns that change more over time. They typically have a greater chance of losing money and may have a greater chance of higher returns. ETFs with lower volatility tend to have returns that change less over time. They typically have lower returns and may have a lower chance of losing money.

RISK RATING

Evolve has rated the volatility of this ETF as **high**. This rating is based on how much the ETF’s returns have changed from year to year. It doesn’t tell you how volatile the ETF will be in the future. The rating can change over time. An ETF with a low risk rating can still lose money.

Low	Low to Medium	Medium	Medium to High	High
------------	----------------------	---------------	-----------------------	-------------

For more information about the risk rating and specific risks that can affect the ETF’s returns, see the “Risk Factors” section of the ETF’s prospectus.

TRADING ETFs

ETFs hold a basket of investments, like mutual funds, but trade on exchanges like stocks. Here are a few things to keep in mind when trading ETFs:

Pricing

ETFs have two sets of prices: market price and NAV.

Market Price

ETFs are bought and sold on exchanges at the market price. The market price can change throughout the trading day. Factors like supply, demand, and changes in the value of an ETF’s investments can affect the market price.

You can get price quotes any time during the trading day. Quotes have two parts: bid and ask.

The bid is the highest price a buyer is willing to pay if you want to sell your ETF shares. The ask is the lowest price a seller is willing to accept if you want to buy ETF shares. The difference between the two is called the “bid-ask spread”.

In general, a smaller bid-ask spread means the ETF is more liquid. That means you are more likely to get the price you expect.

Net Asset Value (NAV)

Like mutual funds, ETFs have a NAV. It is calculated after the close of each trading day and reflects the value of an ETF’s investment at that point in time.

NAV is used to calculate financial information for reporting purposes – like the returns shown in this document.

Orders

There are two main options for placing trades: market orders and limit orders. A market order lets you buy or sell shares at the current market price. A limit order lets you set the price at which you are willing to buy or sell shares.

Timing

In general, market prices of ETFs can be more volatile around the start and end of the trading day. Consider using a limit order or placing a trade at another time during the trading day.

A WORD ABOUT TAX

Keep in mind that if you hold your ETF in a non-registered account, distributions from the ETF are included in your taxable income, whether you get them in cash or have them reinvested.

This section shows the fees and expenses you could pay to buy, own and sell Shares of the ETF. Fees and expenses – including trailing commissions – can vary among ETFs.
