**Before you invest, consider how the ETF would work with your other investments and your tolerance for risk.**

**The Evolve Cryptocurrencies ETF (the “Evolve Fund”) is an exchange traded alternative mutual fund that invests in other alternative mutual funds managed by the Manager that invests, directly or indirectly, in digital assets. Given the speculative nature of digital assets, including Bitcoin and Ether, and the volatility of the digital currency markets, there is no assurance that the Evolve Fund will be able to meet its investment objective. An investment in the Evolve Fund is not intended as a complete investment program and is appropriate only for investors who have a sophisticated knowledge and understanding of the digital assets to which the Evolve Fund may be exposed and the capacity to absorb a loss of some or all of their investment. An investment in the Evolve Fund is considered high risk.**

**The Evolve Fund does not invest in digital assets directly. Instead, the Evolve Fund will invest in other publicly offered investment funds managed by the Manager that invests, directly or indirectly, in one or more digital assets. As of the date hereof, the Evolve Fund intends to invest in the Bitcoin ETF and Ether ETF, each of which is an investment fund currently managed by the Manager.**

### HOW RISKY IS IT?

The value of the ETF can go down as well as up. You could lose money. One way to gauge risk is to look at how much an ETF's returns change over time. This is called “volatility”.

In general, ETFs with higher volatility will have returns that change more over time. They typically have a greater chance of losing money and may have a greater chance of higher returns. ETFs with lower volatility tend to have returns that change less over time. They typically have lower returns and may have a lower chance of losing money.

**RISK RATING**

Evolve has rated the volatility of this ETF as **high**. This rating is based on how much the ETF’s returns have changed from year to year. It doesn’t tell you how volatile the ETF will be in the future. The rating can change over time. An ETF with a low risk rating can still lose money.

Low	Low to Medium	Medium	Medium to High	High
-----	---------------	--------	----------------	------

For more information about the risk rating and specific risks that can affect the ETF’s returns, see the “Risk Factors” section of the ETF’s prospectus.

**NO GUARANTEES**

ETFs do not have any guarantees. You may not get back the amount of money you invest.

**HOW HAS THE ETF PERFORMED?**

This section tells you how Unhedged ETF Units of the ETF have performed over the past 1 year. Returns<sup>1</sup> after expenses have been deducted. These expenses reduce the ETF’s returns.

<sup>1</sup> Returns are calculated using the ETF’s net asset value (NAV)

**Year-by-year returns**

This chart shows how Unhedged ETF Units of the ETF performed in the past 1 year. The ETF dropped in value in 1 of the 1 year.

The range of returns and change from year to year can help you assess how risky the ETF has been in the past. It does not tell you how the ETF will perform in the future.

**Best and worst 3-month returns**

This table shows the best and worst returns for the Unhedged ETF Units of the ETF in a 3-month period over the past 1 year. The best and worst 3-month returns could be higher or lower in the future. Consider how much of a loss you could afford to take in a short period of time.

**TRADING ETFs**

ETFs hold a basket of investments, like mutual funds, but trade on exchanges like stocks. Here are a few things to keep in mind when trading ETFs:

**Pricing**

ETFs have two sets of prices: market price and NAV.

**Market Price**

ETFs are bought and sold on exchanges at the market price. The market price can change throughout the trading day. Factors like supply, demand, and changes in the value of an ETF’s investments can affect the market price.

You can get price quotes any time during the trading day. Quotes have two parts: bid and ask.

The bid is the highest price a buyer is willing to pay if you want to sell your ETF units. The ask is the lowest price a seller is willing to accept if you want to buy ETF units. The difference between the two is call the “bid-ask spread”.

In general. A smaller bid-ask spread means the ETF is more liquid. That means you are more likely to get the price you expect.

**Net Asset Value (NAV)**

Like mutual funds, ETFs have a NAV. It is calculated after the close of each trading day and reflects the value of an ETF’s investment at that point in time.

NAV is used to calculate financial information for reporting purposes – like the returns shown in this document.

**Orders**

There are two main options for placing trades: market orders and limit orders. A market order lets you buy or sell units at the current market price. A limit order lets you set the price at which you are willing to buy or sell units.

**Timing**

In general, market prices of ETFs can be more volatile around the start and end of the trading day. Consider using a limit order or placing a trade at another time during the trading day.

**WHO IS THIS ETF FOR?**

Investors:

- seeking exposure to the daily price movements of certain digital assets;
- seeking a convenient, secure alternative to direct investments in digital assets;
- who have a sophisticated knowledge and understanding of digital assets; and
- who have the capacity to absorb a loss of some or all of their investment.

**A WORD ABOUT TAX**

In general, you’ll have to pay income tax on any money you make on an ETF. How much you pay depends on the tax laws where you live and whether or not you hold the ETF in a registered plan, such as a Registered Retirement Savings Plan or a Tax-Free Savings Account.

Keep in mind that if you hold your ETF in a non-registered account, distributions from the ETF are included in your taxable income, whether you get them in cash or have them reinvested.
