FIXD seeks to provide a stable rate of return, through income and capital appreciation. This ETF invests primarily in domestic and international high quality fixed income securities, and to a lesser extent, adding yield or enhancing returns on the portfolio by opportunistically investing in international fixed income securities, emerging market debt, preferred shares, convertible bonds and non-investment grade bonds.

REASONS TO BUY:

1. MULTI-STRATEGY

- Credit sector and security selection

2. LONG-TERM VIEW

- Credit positions are predominately driven by longer term fundamental views of business and financial risk
- Duration is principally driven by a 2-4 year outlook on interest rates

3. HIGH CONVICTION PORTFOLIO

- Active Risk vs. Benchmark

Commissions, trailing commissions, management fees and expenses all may be associated with exchange traded funds (ETFs) and mutual funds. Please read the prospectus before investing. The indicated rates of return are the historical annual compound total returns net of fees (except for figures of one year or less, which are simple total returns) including changes in unit value and reinvestment of all distributions and do not take into account sales, redemption, distribution or optional charges or income taxes payable by any securityholder that would have reduced returns. ETFs and mutual funds are not guaranteed, their values change frequently and past performance may not be repeated.

The rates of return shown in the table are used only to illustrate the effects of the compound growth rate and is not intended to reflect future values of the ETF and mutual fund or returns on investment in the ETF and mutual fund.
